

Token Stealing Ebook -by CLash#1337

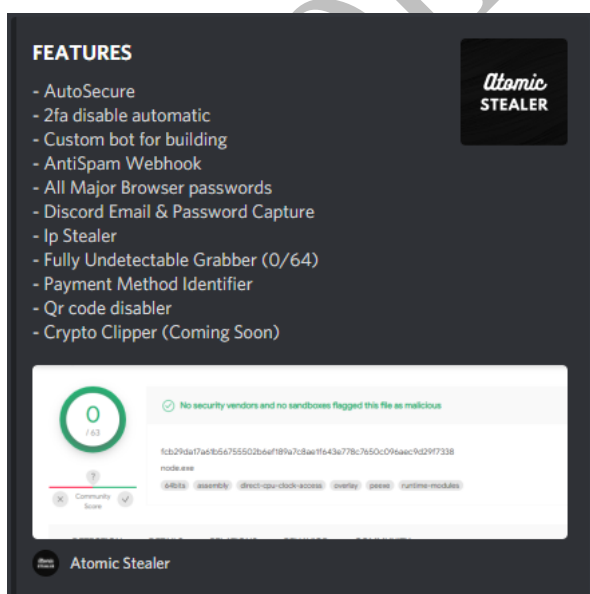

In this workbook I will explain how to token grab discord accounts easily, there are many types of methods to token grab some dumb people with a sexy badge, I'll explain in this tutorial.

Use of token grabbing and stealing?

You can token grab to troll some people and maybe grab some hq accounts like early supporter, boost badges, verified bot dev, and accounts with payment methods, etc. You can sell them and make some easy cash in just 1 day.

Which token grabber to use?

You can use the Atomic Stealer <https://t.me/atomicstealer> which is a token grabber with tons of features and a secure grabber.

You will be provided the executable file aka the token grabber connected to your webhook, then you need to buy either hq lists (account with lots of hq accounts as friends) or you need to mass dm using tokens.

Hq lists are the most used method nowadays as mass dm is getting reduced because of discord's extra protection. The picture of a hq list is posted below-

Hq list Method

Once we get a hq list, we will dm the users about like -

"hey, whatsup

User replies - hi

How are you?

User replies - I'm good, how are you?

I'm good too, btw wanna play some games?

User - Which game?

I got a new game named "name of your game aka virus", lets play that.

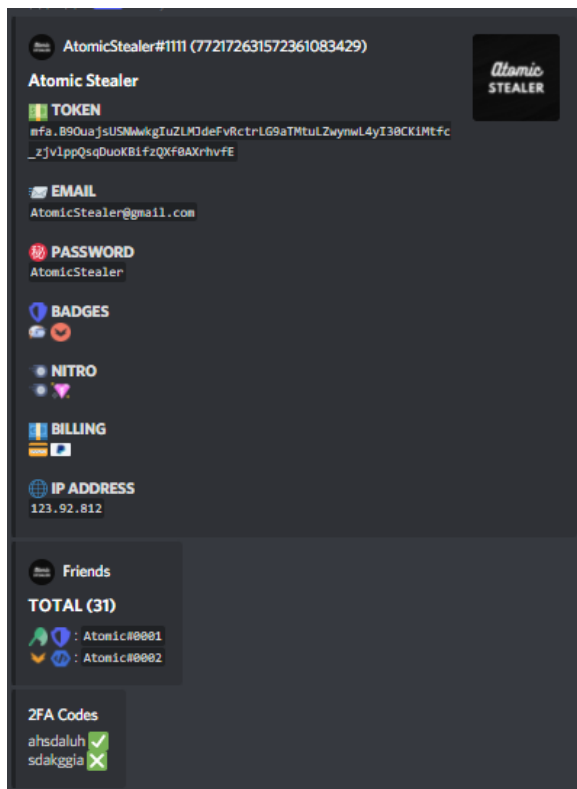

User – Where is it available?

Its not published yet but the owner is my friend so I have it for beta testing.

pass the setup file aka stealer (zip it and upload on mediafire or mega)

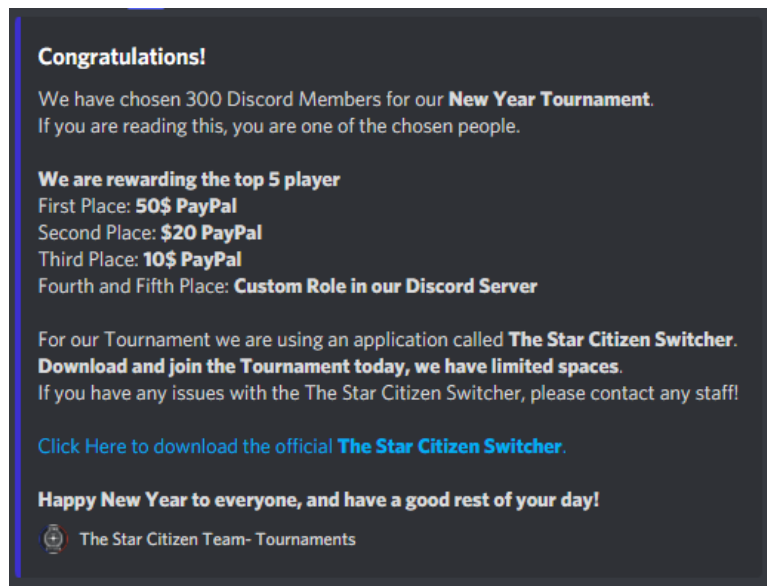

Here is the setup, download it and install the game.

Congrats, you must have got your victim on your webhook

Mass Dm Method

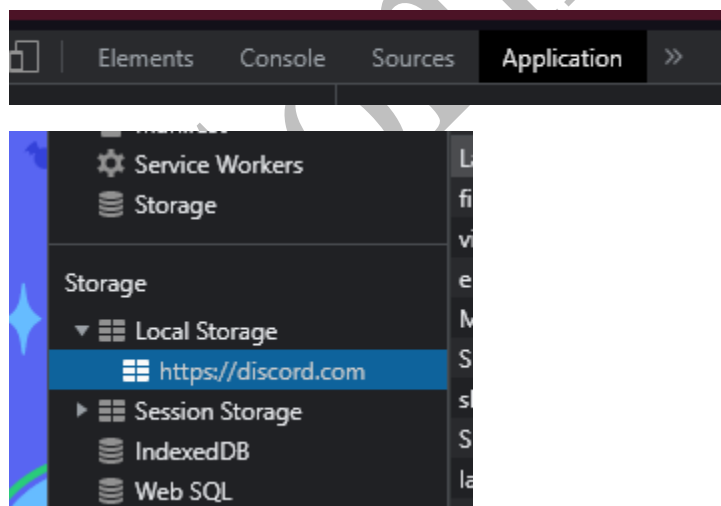

For this method you need email verified tokens, token manager, member id scraper or a badge scraper and a mass dm tool. You need to find a server which doesn't require phone verified accounts and has many accounts like early supporter, boost badges and nitro. Then you need to make a message like an embed (picture posted below)

I used discohook to create this embed, after creating it convert it into .json format. For this ebook we will use a free mass dm tool by V4ns4j available on github. You can see his video available on youtube - <https://www.youtube.com/watch?v=3m56RTbThbg>

How to login into a token?

To login to a token, you need to go to <https://discord.com> , click the login button and then click ctrl+shift+i

Storage	referralProperties	{"referrer":"","referring_dom...
▼ Local Storage	SurveyStore	{"_state":{"hiddenSurveys":{}}...

	token	"TOKEN GOES HERE"

Then reload this page and you will be logged in. Get some tempmails or make some mails using the gmail dot trick. Always remember to first change the password instead of the email and you need to be really fast. After changing the password you need to change the email to secure the account. (this isn't for AtomicStealer as it has autosecure which changes the password and email by itself). If the account has a billing attached then you can bard some nitros. (Remember don't use a vpn or a rdp because it will block the card).

This was everything you need to do to token grab someone. For educational purposes only. Don't use without permission and reselling isn't allowed.
